

Cinefilm High Definition Scanning Pricing

Cinefilm scanning services are priced on a 'per foot' basis regardless of the size of the film reel. We handle Regular 8, Super 8, 16mm & 35mm Cinefilm formats.

We use THE LATEST in industry standard professional cinefilm scanning equipment imported from the US. We scan each frame individually at high speed and then with custom software we "stitch" all the frames back together to form a beautiful High Definition MP4 video file that you can easily edit, share and play on your Smart TV or computer. The files are provided on a USB flash drive supplied by you or us.

All our work is done on site by skilled technicians. We NEVER ship any work overseas or anywhere else for that matter. Standard turnaround time is approx 4-6 weeks. Fast Track Express service is available on request. Sound & DVD copies are an optional extra and priced additionally.

Extra DVD Copies	Any	\$12.95 per DVD

FAST TRACKED EXPRESS SERVICE (Optional Extra)	QUANTITY	PRICE
Order Fast Tracked Within 14 Days	Any	+25% Of Service Costs

How Do I Know How Many Feet I Have?

You can determine the amount of feet you have by examining the diameter of the reels. The original reels that came from the camera were around 3 inches in diameter and contained around 50 feet of film. Quite often these smaller reels were spliced together and placed onto larger reels. The most common larger sizes were 5 inch (200 feet) and 7 inch (400 feet) reel sizes. You can work out a *rough estimate* of how many feet you have by adding it all up based on the reel sizes. If some reels are only partly full you can do an estimate.

How Do I Know If I Have Sound?

Magnetic Sound is rare on cinefilm. 95% of all Super 8 cinefilm is silent simply because the technology only became available much later in the life of this format. You can check to see if your film potentially has sound or not by examining the film itself. If there is a noticeable thin brown strip on one (or two) edges of your film then it could potentially have sound. Sound generally only occurred on Super 8 film.

Optical Sound is sometimes found on 16mm and 35mm film formats. You can see this if there is an edge of the film that contains a visible "wavy" audio track.

USB Flash Drives / Portable HDD / Cloud

USB FLASH DRIVES	CAPACITY	PRICE

We believe in full pricing transparency. Due to the uncertainty of content & condition of obsolete formats, we do understand that it can often be a little difficult to work out an exact cost for your order before completion. For this reason we cannot provide exact quotes. We also do not provide quotes or estimates on arrival of your order. Please contact us via email at ron@reelbox.com.au or call 1300 55 39 55 for clarification on any pricing on the above price list prior to sending your order to us. We are more than happy to assist with providing a written estimate at this time.
